

NOTICE!

The annual test/inspection of the fire protection equipment located at:

is scheduled to commence at:

The fire bells will be ringing intermittently and there may be some interruption in elevator service as part of the testing procedure. Some fire doors may also close automatically. We apologize for any inconvenience and will attempt to keep this to an absolute minimum.

Please ensure that suitable arrangements for young children and sensitive pets are made prior to the referenced start time.

Additionally, testing of the fire sprinklers (if your building is so equipped) may result in some noticeable turbidity in the water supply. Please exercise caution when doing laundry or other domestic tasks that may require the use of water during this time. We recommend that you flush your cold and hot water taps and run your washing machine EMPTY through one complete cycle following the test.

NOTE: It is a requirement under the British Columbia Fire Code that we access all dwelling, occupied and unoccupied units at this time. Please make the necessary arrangements so that we can ensure your suite's fire alarm devices function correctly. A re-inspection fee may be levied for any units that we cannot access (and for which alternate testing arrangements must be made).

The regular testing of your building's emergency systems ensures they will function when required and keep you safe and secure.
Test your smoke alarms monthly!!
